WEIL

Made in the USA

The trade often calls WEIL PUMP the HEAVYWEIGHT. All Weil pumps consistently OUTWEIGH and OUTLAST similar pumps. This difference is by design to make the best. The result is a distortion-free part with high rigidity, consistent machined dimensions, and a longer service life due to increased wall dimensions.

Important: Air-filled, submersible motors are the only design with worldwide engineering acceptance. Weil makes only air-filled, submersible motors. The manufacturing cost is higher. The end result is better.

The Weil Pump Company Inc facility is located twenty miles north of downtown Milwaukee and three miles west of I-43 in the community of Cedarburg, Wisconsin.
